

Neev One — Payment Reminders: Configuration & Usage Guide

Version 1.0 · 19 August 2026

How to set up and run the collections desk: WhatsApp and email payment reminders on the **Due** → **+7** → **+15** schedule.

1. What this feature does

Sales → **Payment Reminders** lists every open invoice that still has a balance, most overdue first, and sends the customer a ready-made reminder through **WhatsApp** or **email** — one click, message prefilled, sent from your own WhatsApp / mail account. No API, no per-message cost.

Every send is stamped on the invoice (date · channel · stage), so the screen always knows which invoices still need a reminder at their current stage.

2. One-time configuration

Step 1 — Enable the feature

Settings → **Features** → make sure "**Payment reminders**" is ON (it is on by default). The "Payment Reminders" entry then appears under Sales in the sidebar.

Step 2 — Put mobile numbers and emails on customers

The buttons use the customer master:

Field on customer	Used by
Mobile	WhatsApp button — a bare 10-digit number is automatically prefixed with 91 (India). Numbers already carrying a country code are used as-is.
Email	Email button — opens your mail client with subject and body filled.

Customer has no mobile? The WhatsApp button still works — it opens WhatsApp's own contact picker with the message ready; you choose the chat.

Step 3 — Get due dates right

The schedule runs off each invoice's **due date**:

- Set **Credit period (days)** on the customer (customer master) — invoices then compute their due date automatically. Blank = 30 days, 0 = due on receipt.
- Or set the due date manually on the invoice.

An invoice without a due date never enters the reminder schedule.

3. The reminder schedule

Stage	Trigger	Chip shown
1	On/after the due date	Due
2	7+ days overdue	7+ days
3	15+ days overdue	15+ days

An invoice that has **reached a stage without a reminder sent at that stage** is flagged "**Send now**" — that's your daily work queue. After you send, the flag clears until the invoice crosses into the next stage.

Filter chips across the top: **All open** · **Send now** · **Due** · **7+ days** · **15+ days**, each with a live count.

4. Sending a reminder

Open **Sales** → **Payment Reminders** and use the buttons on any row:

Button	What happens
WhatsApp	Opens <code>wa.me/<customer mobile></code> in a new tab with the message prefilled. Press send in WhatsApp — done.
Email (envelope icon)	Opens your mail client with subject "Payment reminder — Invoice <no>" and the message as body.
Copy (copy icon)	Puts the message on the clipboard — paste into SMS, Telegram, anywhere.

All three stamp the reminder history; the **Last reminder** column shows `date · channel`.

The message

Dear <customer>,

Gentle reminder: invoice <number> dated <date> for ₹<total> was due on <due date> (overdue by N days).

Balance outstanding: ₹<balance>.

View invoice: <link>

Kindly arrange the payment at the earliest. Please ignore if already paid.

Regards,

<your company name>

- Amounts are the **live balance** (total minus receipts) at send time.
- The view link opens the invoice in Neev One (the viewer needs access).
- Not yet overdue → the wording switches to "is due on <date>".

5. Daily routine (suggested)

1. Open Payment Reminders → click **Send now**.
2. Work the list top-down (most overdue first) with the WhatsApp button.
3. Record receipts as money arrives — paid invoices drop off automatically.
4. Repeat tomorrow. Invoices crossing 7 or 15 days re-enter "Send now" on their own.

6. Troubleshooting

Symptom	Cause / fix
Invoice not listed	It is Draft, Cancelled, Paid, or has zero balance — only open collectibles show.
Stuck at "Not due"	No due date on the invoice — set the customer's credit period or the invoice due date.
WhatsApp opens without a chat selected	Customer has no mobile on file — pick the contact manually, or add the Mobile on the customer master.
Wrong WhatsApp number	Number stored with extra digits/prefix — store either a bare 10-digit Indian mobile or a full number with country code.
"Clipboard unavailable" on Copy	Browser blocked clipboard access (http origin) — use the WhatsApp/Email buttons instead.
Reminder sent but "Send now" still on	The invoice moved into a HIGHER stage since the last send (e.g. sent at Due, now 7+ days) — that's by design: each stage gets its own reminder.

7. What's deliberately NOT here (yet)

- **Automatic sending** — every reminder is human-triggered on purpose; wrongly-dunned customers cost more than a click. The WhatsApp Business API can slot in behind the same buttons when volume demands it.
- **Custom templates / dunning tiers per customer** — say the word if the standard message needs per-company wording.

8. Reference

Where	
Screen	Sales → Payment Reminders
Feature flag	<code>paymentReminders</code> (Settings → Features)
Customer fields used	Mobile, Email, Credit period (days), Contact Person
Stored on invoice	<code>remindersSent: [{ date, channel, stage }]</code>
Code	<code>src/features/sales/PaymentReminders.jsx</code> , <code>src/utils/reminders.js</code>
